Concave beak is contoured for making more uniform omega loops with ease. The round beak has three sections: .045” (1,14 mm), .060” (1,52 mm), .075” (1,90 mm) and made of a hard electro etched alloy to prevent wire slippage. Tip can be easily replaced with the use of the allen wrench.

P2103-00
THREE-JAW Pliers

The central beak is precision aligned and when the pliers is closed, it fits over the level of the two lateral beaks to form bends more acute than 90°.
The tips are slightly tapered and diamond honed to prevent wire scoring.
For round wires up to .036” (0,9 mm). It allows the activation of quad helix, palatal bars etc. in the oral cavity as well.

P2104-00

The tips are shaped to firmly hold wires and devices and perfectly angled to enhance the visibility of the operative field.
The two beaks are diamond honed to make it lip safe.

P2105-00
BAND REMOVING Pliers

When the pliers is closed, the non-padded remover tip does not get in contact with the acetalic resin pad: this allows it to make lever on the tube or the accessory, or on the edge of the band facilitating the safe removal from the mouth.

Caution: maximum cutting capacity: round wires .020” (0,51mm) rectangular wires .022”x.028” (0,56x0,71 mm).

P2110-00
LIGATURE CUTTER

The tips are 15° angled for better field vision near the bracket’s tie wings. The cutting inserts have wide backing ledges to guarantee the maximum anchorage to the body of the instrument.

Caution: maximum cutting capacity: round wires .015” (0,38 mm)

ARM BENDING AND SELF-LOCKING INSTRUMENT FOR EXPANDERS

Handy instrument to firmly hold the expander; it allows for easy and accurate modeling of the arms along with the special arm bending P1620-02. The instrument ends, with a clutch mechanism, are shaped on the model of expander to avoid damage to the bodies and are kept closed by a cursor clamp device that is turned on and off with a simple thumb action. The edge thickness of the clutching ends is designed to indicate the minimum space between the body of the expander and the palatal vault. By placing the instrument with the screw on the plaster model, the correct inclination and the right height to bend the arms will be clearly visible. It is also useful to test the expander prior to use by opening and closing the expander with the special straight key.
