ANATOMICAL 80 MESH PAD

FOR EXCELLENT BOND STRENGTH WITH THE USE OF ANY ADHESIVE, BICUSPIDS FEATURE A BONDING PAD EXTENDED TO OCCLUSAL TO MINIMIZE INTERFERENCES

LASER MARKED BETWEEN TIE WINGS AND IDENTIFICATION
DISTO-GINGIVAL DOT FOR EASE OF PLACEMENT

FDI SYSTEM MARKING ON THE MESH PAD

An FDI (Fédération Dentaire Internationale) identification number is laser marked on the mesh pad of every bracket, clearly indicating the tooth to which a specific bracket will be attached. This method identifies each tooth with a two-digit Arabic number: the first digit indicates the quadrant, the second identifies the tooth according to Palmer's notation. For example: the bracket for the upper right central incisor has number 11 laser-marked on the mesh pad. The number, permanently etched and free of toxic substances, is immediately recognizable and easily readable without the aid of magnifying lenses.

The FDI system laser marking also improves bond strength.

SLIDE™ LOW FRICTION LIGATURES

Slide is a product manufactured with a special polyurethane mix for medical use. It is applied similarly to conventional elastic ligatures. Once placed on the bracket, it creates a passive ligature on the slot that makes the archwire free to slide and to produce its effects on the dentoalveolar structures. This ligature can be used to create low friction with any bracket, but is especially recommended with the Aqua SL, Logic, and Idea-L bracket lines. The particular conformation of the Slide ligature considerably improves patient's comfort during the first phases of treatment. Packs of 10 modules, 6 ligatures each

BALL HOOKS:

PERFECTLY SPHERICAL
AND LOW PROFILE
FOR MAXIMUM COMFORT.

MIM® TECHNOLOGY:

THE IDEAL TECHNOLOGY FOR
THE COMPLEXITY OF THE DESIGN,
MAXIMUM ACCURACY OF THE
SLOT AND UNDER THE TIE WINGS.

SPRING CLIP:

MADE OF A HIGHLY
ELASTIC ALLOY, IT GUARANTEES
EASY AND SAFE OPEN/CLOSE
MOVEMENTS. THE SLIDING
PORTION OF THE CLIP IS
CONSTRAINED BETWEEN
THE BASE AND THE BODY OF THE
BRACKET BY A LASER WELDING
THAT PREVENTS THE POSSIBILITY
OF DETACHMENT.

BEVELED SLOT ON MESIO-DISTAL EDGE:

ALLOWS SLIDING OF ARCHWIRES
FOR HEAVY MISALIGNMENTS,
WHILE AVOIDING NOTCHING
AND BINDING.

TIE WINGS:

FOR THE APPLICATION OF
ANY KIND OF LIGATURE IN
THE EVENTUAL NEED FOR
A BIOMECHANICAL TOTAL
CONTROL.

INTERACTIVE CONTROL

THE SPECIFIC SHAPE OF CLIP AND SLOT OF INTERACTIVE
BRACKETS ALLOWS THE USER TO MODULATE THE MOST
APPROPRIATE LEVEL OF FRICTION FORCE BETWEEN
BRACKET AND WIRE, DEPENDING ON THE NEEDS OF
THE VARIOUS STAGES OF TREATMENT.

INTERACTIVE PHASE

RECTANGULAR ARCH WIRES, USED FOR SPACE
CLOSURE, ROTATION, AND TORQUE CONTROL,
WORK TO ELASTICALLY DEFORM THE CLIP FOR THE
BIOMECHANICAL CONTROL NECESSARY IN THESE
STAGES OF TREATMENT.

PASSIVE PHASE

FIRST STAGE ROUND ARCHES ARE NOT
BOUND BY THE CLIP: THE LOW FRICTION WILL
FACILITATE THE PROCESS OF ALIGNMENT AND
LEVELING.

ACTIVE PHASE

RECTANGULAR ARCHES FOR FINISHING AND
DETAILING COMPLETELY FILL THE SLOT WHILE
GOING INTO ACTIVE CONTACT WITH CLIP:
THIS ALLOWS THE EXPLOITATION OF ELASTIC
PROPERTIES IN ORDER TO OBTAIN MINIMAL
MOVEMENTS FOR FINISHING OF TREATMENT.

INTERACTIVE D.B. METAL BRACKETS SELF-LIGATING

InterActive SL self-ligating brackets, due to their design and reduced dimensions, offer a very comfortable treatment for the patient without loss of control. The interactive clip ensures **an efficient clinical management** with progressive biomechanical control to take advantage of the low friction early in treatment stages, while achieving perfect finishing with the final archwires.

Material & Design

The bracket body is made of biomedical steel and is laser welded on the **80 mesh gauge base with FDI identification**.

The **colored dot with disto-gingival identification** indicates each bracket quadrant, with the same color code of all Leone bracket range.

IDEA-L LINGUAL BRACKETS

IDEA-L lingual brackets feature small mesio-distal sizes, 1.4 mm depth and a special bracket design which make the application of Slide ligatures easy. In most cases, the use of a round wire **MEMORIA®** .012 is sufficient to get the solution of overcrowding and the aesthetic improvement of smile. In cases of dental rotations and/or major misplacements, wires of higher diameter, like **MEMORIA®** or Beta **MEMORIA®**, and conventional ligatures may also be used to gain biomechanical control. To get perfect alignment and levelling of the anterior teeth, an accurate position of the bracket is necessary; it is therefore advisable to use an indirect bonding technique with arch transfer trays made in the laboratory or with the special "Jigs" conceived for this technique.

INFORMATION FOR DISTRIBUTORS OF ORTHODONTIC MINI IMPLANTS, "INTENDED USE", "RESPONSIBILITY", "SURVEILLANCE"

The 93/42EEC directive on medical devices is the official reference that dictates the regulations for marketing medical devices. The directive provides indications for all the phases of existence for the device (from the project phase through the traceability system, and surveillance), and it identifies all the characters who have to comply with the directive itself, which includes not only the manufactures, but also the distributors, the buyers, and even the users. As for the responsibilities of the single competence, Leone S.p.A. recommends to its direct clients, dental depots and exclusive dealers to follow and maintain the indications, warnings, and information for the univocal identification of the medical devices, as provided by the manufacturer on the labels, during all the marketing phases. With specific regard to Class IIB implantable products, all dental depots and exclusive dealers of Leone S.p.A. are required to keep records of the distribution of medical devices as of traceability available for verification, in case of need to trace back a product or its user in a univocal way.

SELF-DRILLING ORTHODONTIC MINI IMPLANTS WITH CLOSED DUAL SLOT

The head of the mini implant is available in two transmucosal heights and has a **closed dual slot** for the application of wire and/or spring segments. The **closed dual slot** section is .018"x.025" and can accommodate round or rectangular wires. A minimally invasive surgical procedure is needed: in one phase, transmucosal with very good primary stability for immediate application of the orthodontic traction.

Mini implants are supplied non-sterile (for the sterilization process see the instruction for use in the package), please use with the proper adapter for handpiece or with the screwdriver for hand insertion.

SELF-DRILLING ORTHODONTIC MINI IMPLANTS

The head of the self-drilling mini implant is available in two transmucosal heights, it is mushroom shaped to facilitate the application of elastic ligatures and coil springs. A one stage, transmucosal and minimally invasive surgical technique is needed, with optimal primary stability for the immediate load of the orthodontic appliance. Self-drilling mini implants are supplied not-sterile (for the sterilization process see the instruction for use in the package), to use with the special handpiece adapter. The use of a surgical micromotor is recommended.

Once sterilized insert the head of the mini implant to the handpiece adapter Cat. 080-1002-00 (for Self-Drilling Orthodontic Mini implant) or Cat. 080-1002-01 (for Self-Drilling mini implants with closed dual slot) connected to a surgical micromotor.

Lean the drilling tip of the mini implant on the attached mucosa in the selected area. Exert a pressure gentle enough to punch the soft tissues till the cortical bone is reached.

Set the minimum speed on micromotor to 300 rpm and torque value 40 Ncm. Start to drill the minimplant while irrigating abundantly with water. Immediately after having reached the cortical bone and as soon as the presence of a softer bone tissue has been detected, reduce the micromotor maximum speed at 50 rpm. Complete the insertion under these parameters.

For use with the contra-angle for the insertion of mini implants also in difficult access areas.

CLASS II CORRECTOR

The non-compliance device for Class II correction.

The small sizes of the device allow for optimum patient comfort while the constant and light force delivered by the spring **MEMORIA®** 200 g, located inside the plunger, stimulates the mandibular advancement. In this **version, the fluidity of movement and the strength of the telescopic mechanism are improved.** The packages include all the needed parts for the application of a bilateral correction device.

Available in **3 lengths** with both mesial and distal fitting to upper molar tube, for a total of 6 possible positions in the mouth. When used in the mesial position, it can be placed on a single direct-bonding tube without the need of band or round tube.
